Summary

Computer Science undergraduate at BINUS University with a strong interest in backend development. Comfortable building RESTful APIs, managing relational databases like PostgreSQL and MySQL, and implementing token-based authentication using Node.js and Express.js. Hands-on experience includes developing a POS system for a retail store and an AI-powered rare animal detection app using FastAPI and YOLOv8. Outside of coding, actively involved in campus organizations — served as a Person in Charge for team-building programs and taught web development workshops to high school students. Always eager to learn, grow, and explore internship or collaboration opportunities in software engineering.

Education

Bachelor of Computer Science (S1), *BINUS University* 09/2024 – Present
Malang, Indonesia
Currently pursuing a Computer Science degree with a strong focus on software engineering and backend systems. Coursework includes Algorithm & Programming, Data Structures, Object-Oriented Programming, Database Design & Management, Computer Networks, and Software Engineering. Actively involved in campus organizations while maintaining a solid academic foundation in both theory and hands-on development.

High School Diploma — Science Major (MIPA), *MAN 1 Mojokerto* 07/2020 – 06/2023
Mojokerto, Indonesia
Graduated from the Science (MIPA) track, building a strong foundation in logical thinking, mathematics, and basic computational problem-solving that later became the stepping stone toward a career in computer science.

Projects

Edja Corner — Minimarket & POS Backend System , *Backend Developer · Team Project* 02/2026 – 05/2026
Built the backend system for a minimarket management app that combines a multi-role login portal, a Point of Sale (POS) cashier with automatic transaction calculations, and an owner dashboard with stock analytics and restock alerts. Responsible for designing the relational database schema using Sequelize ORM on PostgreSQL, implementing JWT-based authentication with bcrypt password hashing, setting up role-based access control (RBAC) for admin, cashier, and owner roles, and developing standardized RESTful API endpoints. Worked closely with the frontend team to ensure smooth integration across all features.

Nusa Fauna — AI Rare Animal Detection & Conservation System , 10/2025 – 12/2025
Backend & AI Integration Developer · Team Project
Developed a web application that automatically detects and classifies Indonesia's rare endemic animals based on the IUCN Red List conservation status. Integrated an Ultralytics YOLOv8 computer vision model deployed as a microservice through FastAPI, with interactive bounding box rendering on an HTML5 canvas. Handled the backend API layer and model-serving pipeline using Python and PyTorch, making the detection results accessible and easy to understand for conservation awareness purposes.

Skills

JavaScript
Node.js, Express.js

Python
FastAPI

SQL & Database
PostgreSQL, MySQL, Sequelize ORM

API Development
REST API, JWT Authentication, Postman

Development Tools
VS Code, Linux / CLI

Version Control
Git, GitHub

Organisations

UKM Futsal BINUS University Malang, *Creative Coordinator* 04/2026 – Present
Coordinating the creative and visual output for the organization, primarily responsible for designing promotional posters and visual content published on the official Instagram page. Ensuring consistent branding and engaging designs to attract student participation in futsal events and activities.

HIMTI BINUS University Malang, *Activist — Publication & Marketing Division (Commission 2)* 02/2026 – Present
Serving as an active member of Commission 2 (Publication & Marketing Division), which is responsible for building external relations, managing communications with various stakeholders, and acting as the promotional and distribution arm for HIMTI's products and initiatives. Involved in content planning, marketing campaigns, and cross-organizational outreach efforts.
